

Python Basics Notes

1. print() - Screen par output dikhata hai.

Example: `print("Hello")`

2. input() - User se input leta hai.

`name = input("Apna naam: ")`

3. Variables:

`age = 20`

4. Data Types:

`int, float, str, bool`

5. Operators:

`+, -, *, /, %, ==, !=, >, <, >=, <=`

6. if-else:

Agar condition sahi ho to if chalega, warna else.

7. for loop:

`for i in range(1,6): print(i)`

8. Function:

```
def add(a,b):  
    return a+b
```

Difference:

`print()` = sirf dikhata hai.

`return` = value wapas deta hai.

Practice:

- Calculator
- Vote eligibility
- Odd/Even checker
- Table printer
